Building a Culture of Usage:
Making Lone Worker Tech Routine

Investing in lone worker technology is a vital step towards protecting your employees who work alone, but for it to be truly effective, **usage must be consistent and integrated into daily workflows.**

Here's how to make safety technology a seamless part of your team's routine.

1. Help employees understand the 'why' behind the tech

Share stories that show impact

Highlight real stories from users that show how the technology has helped in real-world situations.

Involve users from day one

Involve users early in the implementation process to build trust and engagement.

2. Embed Lone Worker Safety into Culture

Get buy-in from across the business

Form a Lone Worker Project Group with members from different departments to champion the technology and address concerns across the organisation.

Define clear roles & ownership

Set clear roles and responsibilities for safety technology usage. Define who is responsible for what aspects of the system and establish accountability at all levels.

Use data to drive engagement

Use regular reporting to keep safety front of mind. Share usage statistics, success stories, and improvement opportunities in team meetings and company communications.

3. Use Technology as an Enabler

Match the tech to the task

Give employees safety solutions that suit their role, environment and personal preferences.

Make it seamless

Use shortcuts, automations and integrations to fit safety tech into existing systems.
