

PARTNER INTEGRATION: SURECAM

Video-enabled lone worker protection

Protect drivers in and out of the vehicle

Peoplesafe's lone worker app is integrated with SureCam's video telematics platform protecting all company assets on the road.

Each solution transmits data in real time to facilitate proactive management of emergency solutions. Drivers will be supported with 24/7 SOS alarm response in an emergency while the vehicle is covered by dashcams, tracking and telematics.

> 20% of drivers are taking steps to protect themselves at work as they feel increasingly vulnerable.

Drivers are often most in danger when they exit the vehicle – as a result of slips, trips, falls or an act of violence – so Peoplesafe's lone worker services offer protection against these risks

Benefits of a joint solution

- **Complete driver protection**– inside and outside of the vehicle.
- **Immediate emergency help**– Get emergency help faster than 999, as ARC controllers can contact local police teams directly.
- **Improved fleet management**– SureCam's video telematics platform will be able to report by driver and save manual administration
- **Save on insurance claims** – reduce false claims made against drivers with audio recordings and visual footage captured as evidence.

HOW IT WORKS

Customers signed up to the joint service will have an additional tile on their Peoplesafe smartphone app that integrates with the SureCam dashcam.

USER STORY

Unloading at a large site alone, a user felt a pain in the bottom of their back getting progressively worse. Struggling to breathe or move, they pressed the SOS alarm with an ambulance called in under five minutes.

HERE'S WHAT OUR CUSTOMERS ARE SAYING:

"We are committed to adopting industry best practice technology and processes, which is why we are rolling out the video-enabled lone worker service. This latest initiative will not only increase compliance of our lone worker processes, but also extend and enhance the levels of protection we can provide our drivers."

- Dave Bonehill, Head of Fleet, Ringway Jacobs

When the ARC receives an alarm from a vehicle, it will know:

Who they are

Who they work for

Where they were when the incident happened

Any critical information about them

The ARC Controller will also have access to the footage of the incident from the front, rear and inside of the vehicle* allowing them to assess the situation and gather vital information to ensure your staff get the best response possible.
