

PARTNER INTEGRATION: SURECAM

Video-enabled lone worker protection

SureCam and Peoplesafe have entered into a strategic partnership to develop an industry-first lone worker service that better protects drivers in and out of the vehicle.

Peoplesafe's lone worker app has been integrated with SureCam's video telematics platform enhancing the information available to Controllers at Peoplesafe's Alarm Receiving Centre (ARC).

Each solution transmits data in real-time to facilitate proactive management of emergency situations. Drivers will have immediate protection when needed to give them the reassurance to feel safe. The Peoplesafe app provides a quick and reliable way to request assistance in the event of an incident away from the vehicle or in a road collision.

Benefits of a joint solution

- **Complete driver protection** – inside and outside of the vehicle.
- **Additional information** – ARC Controllers will have access to both audio and visual of an incident, as well as a detailed employee profile.
- **Driver ID** – SureCam's video telematics platform will be able to report by driver.
- **Alarm verification** – the ARC will confirm the type of alert being received (e.g. collision, SOS button, fall detection) and handle the alarm accordingly.
- **Extra evidence** – audio recordings and visual footage captured before, during and after an incident will be available in the event the information is needed for evidential purposes.

> 20%

of drivers are taking steps to protect themselves at work as they feel increasingly vulnerable.

Drivers are often most in danger when they exit the vehicle – as a result of slips, trips, falls or an act of violence – so Peoplesafe's lone worker services offer another layer of protection to that already provided by dashcams, vehicle tracking and video telematics.

SURECAM

How it works:

Customers signed up to the joint service will have an additional tile on their Peoplesafe smartphone app that integrates with the SureCam dashcam.

To start the linking process, drivers have two options:

1. Scan the QR code on the SureCam camera
2. Enter the vehicle's registration number

On the road, as soon as an accident is detected, the dashcam will record the incident; an alarm is simultaneously raised to the Peoplesafe ARC and an emergency call is automatically created.

When the ARC receives an alarm from a vehicle, it will know:

The ARC Controller will also have access to the footage of the incident from the front, rear and inside of the vehicle* allowing them to assess the situation and gather vital information to ensure your staff get the best response possible.

*Dependent on SureCam product

Here's what our customers are saying:

“ We needed to ensure that all of our drivers are protected and we all have the assurance that they have a backup in terms of communication and response, Peoplesafe provides us with this. ”

User Story

Unloading at a large site alone, a user felt a pain in the bottom of their back getting progressively worse. Struggling to breathe or move, they pressed the SOS alarm with an ambulance called in under five minutes.
