

PEOPLESafe SOS APP

The Peoplesafe SOS App provides round the clock protection for employees, making sure they get home safely. Whether they are commuting at unsociable hours or have to walk to a car park off-site, Peoplesafe is the perfect companion.

This app is suitable for those:

Working late

Travelling off-site

Working from home

Available for:

KEY FEATURES

SOS ALARM

More than just a panic button; our app has a live connection to a 24/7, fully accredited Alarm Receiving Centre. On average, Peoplesafe's in-house ARC listen to alarms in just 3 seconds. It is staffed with highly-trained experts who will be able to assess the situation and act accordingly.

SHARE MY LOCATION

The Peoplesafe SOS App encompasses a 'Share My Location' feature which allows users to share their live GPS position with their personal contacts.

USER SCENARIOS

When considering a way to protect your employees, it is important to consider the Person, the Environment and the Task (PET). Below are user scenarios where having the Peoplesafe SOS App could greatly improve the safety and wellbeing of the employees.

	Problem	Feature	Benefit
 Working late	Justin regularly finishes work after 10pm and uses public transport to get home. When it's dark and there are less people around, he can feel vulnerable and intimidated, especially if he needs to walk past groups.	Share Location 	A family member or friend can monitor his position until they can see he has arrived home safely.
 Travelling off-site	Kara parks in a nearby residential road that is accessed by walking down a poorly lit alleyway. Occasionally, she has to walk to her car alone which makes her feel uncomfortable, particularly in the winter months when it gets darker earlier.	SOS Button 	24/7 managed alarm response if she felt in danger or was the unfortunate victim of an attack.
