

INTERNATIONAL TRAVELLER

Keep international travellers safe in an emergency by locating and communicating with them while they're overseas using a two-way crisis communication platform.

Confidence that international employees are protected

Respond quickly to critical events to ensure the safety of your people through a dedicated platform that can locate and communicate with individuals in affected regions.

Also give your people the peace-of-mind that they can speak to your SOC at the touch of a button whenever they are in danger through a dedicated SOS app.

Streamline business continuity procedures for international employees and benefit from faster response times alongside tracking staff more effectively.

SOC Integration

Security teams can see and respond to an emerging crisis or SOS alarm in seconds

Incident Management

Managers can effectively deal with a crisis by viewing the real time incident reporting of who has read and responded to the critical message

Discreet Alarm

Users can activate an alarm without raising suspicion by pressing the power button or shaking the smartphone

Geofence Notification

Send communications to employees in a certain region to warn and inform them of potential risks to their safety in the area

PERSONAL ALARM PROTECTION

Using an app on their smartphone, workers can raise a SOS alarm, 24/7, if they feel threatened, unsafe or unwell. To avoid suspicion, the alarm can be raised discreetly either by shaking the handset or continually pressing the power/lock button.

All alarms are answered and triaged by the Peoplesafe Alarm Receiving Centre (ARC) before being professionally handed over to the company's security team or SOC.

For organisations without a SOC, we offer additional services which can extend your alarm response capabilities to an international reach.

ADDED VALUE SERVICE OPTIONS:

Employees can confirm they arrived safely when visiting high-risk countries through welfare checks.

Get local emergency help in 35+ countries with our Euro-watch service.

Inform employees of critical incidents by SMS as well as through the dedicated app.

USER SCENARIO

While visiting the USA on business, an employee has a vehicle accident due to a severe rainstorm and activates their alarm. The Peoplesafe Alarm Controller notes that the employee is overseas and contacts the global SOC who sends an emergency response to their location. At the same time, a mass notification message is sent to employees in a similar location due to a possible hurricane forming, requesting them to confirm their safety.
