

PEOPLESAFE ALERT

Warn and inform your people in an emergency

Our dedicated emergency communication system immediately raises an alert across your entire organisation to coordinate a crisis response. Instant auditing ensures you can monitor responses and update as the situation changes.

Rapid and reliable communication:

Send 2,000 messages per second in the event of a critical incident.

Crisis message alarm:

Cuts through the noise of other notifications with a specific alarm.

Dedicated and resilient:

Override a device's silent and Do Not Disturb settings and send notifications repeatedly until the message has been read or responded to.

Personalised and targeted:

Segment and target specific groups or individuals based on predefined criteria such as job role or location.

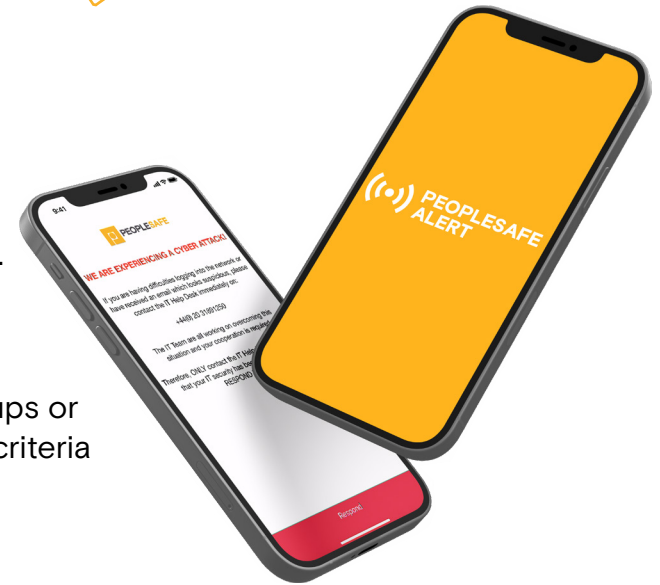

Trusted communications:

Messages cannot be forwarded or edited, so information always remains correct and consistent.

Multiple sending options:

Send messages from a web-based management portal, authorised email accounts, SMS or by simply making a phone call.

“Peoplesafe Alert has helped to significantly reduce our mobilisation times. We achieve a 100% message open rate and an 91% response in under a minute. The service will help to save lives.”

– Control Room Manager, UK Fire Service

PEOPLESFANE ALERT WITH SMS (OPTIONAL EXTRA)

Notify anyone and everyone in a crisis- Notify not only employees, but also contractors and temps about the critical event and safety measures via SMS.

Reliable message delivery- Guarantees fast message transmission through a carrier-grade SS7 service designed to be highly reliable and robust.

Global reach- Can be used internationally even where data connectivity may be limited.

Bulk SMS messaging- Instantly send a text message to a large group of people with 1,000 SMS messages sent per second.

IMPLEMENTATION

Peoplesafe Alert can be seamlessly integrated with existing HR systems, as well as Azure Active Directory, which will ensure that end user details are always kept up to date. This is vital to reduce management overheads and ensure all users receive the communications.

HOW IT WORKS:

1. Emergency event is recognised

2. Business' major event action plan is implemented

3. Notifications are sent via multiple channels to improve delivery success

4. Impacted employees or customers are sent crisis communications

5. Peoplesafe Alert Portal creates reports on delivery and response success rates
