

# Peoplesafe Alert

Simple emergency communication platform. Dedicated software to send multichannel safety notifications to your employees via app, SMS, email and desktop

## Transparent costs

Save money with no implementation or set-up fees. No charges for professional services or system configuration.

## Simple data syncing

Integrations into Active Directory and HR platforms enable you to communicate with the most up-to-date information.

## Never miss a message

Guaranteed delivery from a secure, air-gapped environment. Protects you against network outages and cyber-attacks.

## Minimal training

Set up in an hour and send messages in seconds. Easy-to-use platform means low requirements to be proficient.

## Real-time insights

Instantly track message delivery and recipient responses from one easy to understand dashboard.

## Streamline notifications

Dedicated channel for communications. Send emergency notifications or safety reminders to your workforce.

## Key Features

### Accelerate responses

Set up groups of people (e.g. first aiders, senior leadership or IT engineers) and message templates to cover likely events. You can standardise responses and save valuable time.

### Ensure vital messages are read

Reach staff even if their device is muted by overriding silent and Do Not Disturb settings. Send notifications repeatedly until it has been read or responded to.

### Rapid and trusted

Send up to 2,000 messages per second across app, SMS, email and desktop. The service is hosted in the UK, fully GDPR compliant and ISO27001 certified.

## Use Cases

**Crisis Management** – warn and inform your staff of a critical event

**Business Continuity** – quickly enact your emergency response plan

**Lone Workers** – proactively communicate instructions and information to your dispersed workforce

**Mobilise Team** – gather key team members to respond to a critical event

**Security Threats** – send updates about an active safety incident

**Office Safety** – lockdown and evacuate sites during emergencies or communicate facilities issues

**IT Escalations** – notify your team of a suspected network outage or cyber-attack

**Severe Weather** – share critical information with affected employees during severe weather events
